

Zero-In Moth Balls (New Generation)

Use to protect clothes and fabrics in wardrobes, closets, chests, airing cupboards and drawers, as well as suitcases and other storage containers. Can also be placed inside suit and clothing covers.

- Kills moths, eggs and their larvae
- Two pack sizes containing 10 or 30 balls
- Dry treatment - no drips, staining or unpleasant smells
- Provides up to 3 months protection
- Easy and economical to use
- Contains 0.05% transfluthrin

For storage use, in drawers and cupboards, and other textile containers, simply place one or more moth balls with clothing or textile to be protected. Each ball protects up to 1.17m³. Do not remove the ball from the sachet. Use one ball per drawer. Use 2 to 3 balls for normal sized (two door) wardrobes.

The balls contain Transfluthrin which is a volatile pyrethroid insecticide. It is both repellent to insects and will kill insects on contact and inhalation and works best in enclosed environments.

Do not place between clothing as this will impede the release of the protectant. Instead, place on top of the items to be protected or at risk.

The balls can be used to control insects that are present inside complex structures such as taxidermy. Place the affected item and some balls inside a suitably large polythene bag such as a biner liner, seal and leave for several weeks.

One ball will protect 1.17 cubic metres.

The product has a shelf Life of 2 years from date of manufacture
